

BUSINESS SUPPORT LETTER

February 5, 2016

To Whom It May Concern,

As members of the Wyoming Business Community involved in the Science Standards Review process, we are confident that the Wyoming Science Standards will provide an important foundation for Wyoming graduates locally and globally. We believe the Science and Engineering Practices will develop skills specifically needed to fill the job demands of the future. The integration of math and language arts standards should produce graduates with the ability to use information from a variety of sources, solve problems, and make informed workplace decisions.

We encourage our fellow business owners and industry leaders in Wyoming to support implementation and use of the Wyoming Science Standards and embrace the critical role we all play in solidifying the knowledge and skills they deliver.

Sincerely,

Wyoming Science Standards Review Committee
