

The mission of the Science Initiative Roadshow is to form an inclusive network of sustained relationships through STE(A)M outreach and campus visits, that facilitate interdisciplinary and transdisciplinary creative thinking and active learning in diverse Wyoming K-PhD students, educators at all levels and community members.

Our team of UW instructors and students would love to collaborate with your teachers and students to bring active learning to your school!

WHAT DO WE OFFER?

1. Customizable curriculum that melds our research expertise with your learning outcomes
2. A diverse team of scholars across levels and science disciplines who are trained in teaching and learning
3. Hyperflexible modalities for learning - from online to outdoor to in the classroom
4. Sustained partnerships enabling authentic application of science in community problem solving
5. Long-lasting relationships that empower learners across levels
6. Educational development (particularly training in inclusive active learning modalities) for K-12 teachers to improve and enhance STEM education

WHAT ARE K-12 TEACHERS SAYING ABOUT US?

The Roadshow allowed my students to realize that they can do anything they want to do! It pushed me outside of my comfort zone and allowed me to now feel okay to take on things that I'm not an expert on. It gave me that shift in perspective. I went from nervous to excited...

-Nanna Frazier (Riverton Middle School)

The Roadshow allowed my students to see someone who was, not so long ago, in their shoes who is now a scientist. Whenever I have someone else in the classroom it opens up the possibility for me to interact with my students in a different way, to hear curiosity from my students.

-Sarah Hackworth (Sheridan Middle School)
